HOW TO DECIDE THE RIGHT COLOR FOR YOUR

Below you will find few **simple** but very powerful tips to keep in mind when deciding on **wood flooring** color for your interior:

#1
New floors must match existing wood floors to maintain the integrity and the flow of the home,

#2
Darker colors bring out the warmth in other elements of decor, where the walls are not dark.

#3
Black and dark tones are a popular choice for artists' studios, modern and chic interiors.

#4
Deep and bold colors (various shades of red: Jatoba or oak and ash stained in similar colors) are perfect for commercial interiors, offices and other large spaces where flooring becomes central element of decor

#5
White and grey floors will make your room spacious.

#6
Take advantage of flooring samples. While photos of interiors and virtual room planner can give you a general idea of what end result might be, there is no better way of determining the floor color than seeing the sample on-site in natural light.

#7
Room size, texture and color of walls, ceiling height and color of furniture should be your first considerations when choosing a color for your floor. In order to final design being successful the colors must complement each other

#8
Avoid using dark floors in small rooms with dark walls - it will make room even more dense and depressing.

#9
In the rooms with low ceiling go for light colored floors and walls.

#10
Natural unstained wood or traditional shades of brown are perfect if you prefer classic look.

#11
Warm golden, browns and red wood tones will make your room cosy.

#12
Go for natural colored wood floors in matt finishes if ability to conceal small dents and scratches is a must.

#13
Remember that color must complement each other and contrast. Floor cannot have identical color as your furniture and walls.
